

Start with a standard 8.5" x 11" piece of paper.

Fold the top-left corner down.

Unfold.

Do the same with the top-right corner.

Unfold again.

Turn paper over.

Fold the top edge of the paper down to the bottom of the diagonal creases.

Unfold.

Turn paper over again. If everything is correct up to this, the diagonal creases will be on one side and the horizontal crease on the other.

Bring the edges of the horizontal crease together.
If everything is correct up to this, no new creases
will need to be made.

Fold the ends of the newly formed triangle up
towards the top.

Fold the left and right corners of the diamond
towards the center.

Fold both small triangles at the tip down. The tip will no longer exist after this fold – the front should now be flat.

Unfold the two small triangles you just folded down.

Open up the diamond again.

Fold both small triangles down again.

Insert the flaps into the slits of the triangle. You'll have to bend them a little to get them inside, but will rest flat once in with no protruding parts.

Turn the sides up to create winglets. Turn the plane over and grip it by the bottom diamond.

Enjoy!
